SUMMARY

As a Computer Science student at Vignan, I have a strong foundation in programming, with exposure to AI/ML, full-stack development, and database systems. My hands-on work in building innovative software solutions reflects my passion for technology and continuous learning. I have developed strong problem-solving, analytical, and development skills through real-world projects. With a CGPA of 8.06 and a proactive learning mindset, I am eager to contribute effectively in a challenging internship role.

EDUCATION

Bachelor of Technology in Computer Science Engineering

Vignan Institute of Technology and Science

2023 - Present Hyderabad, India

CGPA

8.02 / 10

Intermediate

Alphores Jr College

2021-2023 Warangal, India

Percentage

90.6 / 100

Secondary Education

GREENWOOD HIGH SCHOOL

2021 Warangal, India

Percentage

71.5 / 100

SKILLS

Python MongoDB SQL Express.js React

Node.js REST Numpy Matplotlib Pandas

Scikit-Learn TensorFlow OpenCV Docker

Kubernetes Git GitHub

CERTIFICATION

Programming, Data Structures and Algorithms Using Python – NPTEL (IIT Madras)

Strong foundation in data structures, algorithms, and problem-solving

Machine Learning Fundamentals – Infosys Springboard

Covered core ML concepts including supervised learning, model training, and evaluation

PROJECTS

HACKVIBE

HackVibe Real-World Hackathon Management Platform

- Developed and deployed a real-world web application used for managing hackathon registrations in my college
- Designed and implemented the participant registration module with backend data handling
- Streamlined event coordination by enabling efficient participant data management and automation

Jan AI

AI Agent for Government Scheme Assistance Jan AI

- Developed a voice-enabled AI assistant to help users discover and apply for government schemes
- Implemented conversational interaction and AI-driven retrieval to guide users through eligibility and application processes
- Enabled multilingual support and simplified complex government form workflows for improved accessibility

Crop Disease Detection

Crop Disease Detection using Machine Learning

- Built an image-based disease detection system to identify crop diseases from leaf images
- Applied image preprocessing and classification techniques to improve model accuracy
- Demonstrated the practical application of machine learning in solving agricultural challenges
