OBJECTIVE

Computer Science student at Vignan with a strong foundation in programming and problem-solving. Experienced in AI/ML, full-stack development, and database systems, with proficiency in C and Python. Passionate about building innovative solutions and continuously improving technical skills. Seeking an internship opportunity to apply my knowledge and contribute to real-world software development.

EDUCATION

2023 - Present	B.Tech in Computer Science Engineering Specialization in Artificial Intelligence & Machine Learning	Vignan Institute of Technology & Science	CGPA: 8.02
2021 - 2023	Intermediate (Mathematics, Physics, Chemistry)	Alphores Jr College	Percentage: 90.2
2021	Secondary Education	Greenwood High School	Percentage: 71.2

PROJECTS

HackVibe – Real-World Hackathon Management Platform

- Developed and deployed a real-world web application used for managing hackathon registrations in my college.
- Designed and implemented the participant registration module with backend data handling.
- Streamlined event coordination by enabling efficient participant data management and automation.

AI Agent for Government Scheme Assistance (JanAI)

- Developed a voice-enabled AI assistant to help users discover and apply for government schemes.
- Implemented conversational interaction and AI-driven retrieval to guide users through eligibility and application processes.
- Enabled multilingual support and simplified complex government form workflows for improved accessibility.

Crop Disease Detection using Machine Learning

- Built an image-based disease detection system to identify crop diseases from leaf images.
- Applied image preprocessing and classification techniques to improve model accuracy.
- Demonstrated the practical application of machine learning in solving agricultural challenges.

SKILLS

Full-Stack Development

- MongoDB, Express.js, React.js, Node.js, RESTful APIs

Machine Learning & Computer Vision

- Supervised Learning, Classification Models, Convolutional Neural Networks (CNN), Data Preprocessing & Feature Engineering, Model Evaluation & Tuning, NumPy, Pandas, Scikit-learn, TensorFlow, OpenCV

Core Engineering Concepts

- Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems

DevOps & Development Tools

- Docker, Git, GitHub, VS Code

CERTIFICATION

Programming, Data Structures and Algorithms Using Python – NPTEL (IIT Madras)

- Strong foundation in data structures, algorithms, and problem-solving

Machine Learning Fundamentals – Infosys Springboard

- Covered core ML concepts including supervised learning, model training, and evaluation
